Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 8 and 14 are rejected under 35 U.S.C. 102(e) as being anticipated by Kobayashi (US 7,046,096). Kobayashi notes a surface-acoustic-wave (col. 3, lines 57-60) sensor-included oscillator circuit comprising: a piezoelectric substrate (col. 3, lines 57-60); an electrode arranged on the piezoelectric substrate so as to excite a surface acoustic wave; a reaction film (col. 15, ll. 5-10) arranged on the piezoelectric substrate so as to cover the electrode and so as to excite a surface acoustic wave, the reaction film being bound to a target substance or a binding material to be bound to the target substance; and a surface acoustic wave sensor that is capable of detecting a bit of mass loading on the basis of a variation in frequency being connected as a resonator;

Art Unit: 2834

wherein the surface-acoustic-wave-sensor-included oscillator circuit includes a direct-current cutting capacitor (62, 64 in fig. 8) connected in series to the surface acoustic wave sensor (34), and an impedance matching circuit (20) including the direct-current cutting capacitor is provided in the surface-acoustic-wave-sensor-included oscillator circuit.

The device may operate as a biosensor apparatus comprising the surface-acoustic-wave-sensor-included oscillator circuit as described. Note that this is intended use and not further limiting to the claimed structure.

Allowable Subject Matter

Claims 9-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

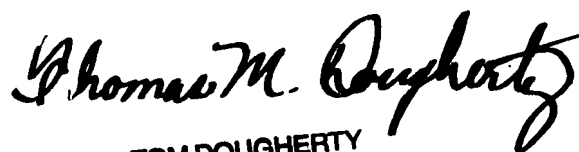

The following is an examiner's statement of reasons for allowance: the prior art does not show the circuit arrangement claimed in claims 9-11.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
